What qualifications are needed to enter Medical Degree course?

All applicants must have completed the 10+2, Grade 12, or equivalent examinations, and scored 50 per cent or more in each of the subject of Physics, Chemistry, Biology and English. Holders of a Bachelor Science (BS/BSc) degree may also opt for the direct MD programme.

Q: DO I have to sit for an entrance level examination before taking the course?

No entrance level examination is required for the BS-MD course.

Q: What is the total duration of the course?

The BS-MD double-degree programme lasts for a total of 5 years. This will consist of theory and laboratory/practical lessons. Towards the end of the programme, students will also undergo clinical rotations, in which they will be attached to selected hospital departments and treat live patients under the guidance and supervision of a practising doctor.

Where will the clinical rotations be conducted?

The clinical rotations will be conducted in hospitals that are affiliated or associated with the university. Top students in some of the Universities may also have the opportunity to perform their clinical rotations in overseas hospitals, including those in the USA.

Why choose a university in the Philippines?

- Cutting edge curriculum
- Integrated problem-based learning approach
- English speaking country
- Affordable tuition fees
- Affordable living costs
- Screening test preparation for the licensing examinations required by Medical Councils of the students' home countries
- USMLE (United States Medical Licensing Examination) test preparation available in Philippines
- Safe environment
- Well established infrastructure in the universities and hospitals
- Excellent boarding and lodging provided by the universities
- Internation exposure
- Located in the heart of Asia, with easy acces to many parts of the world, especially Asia

BS-MD Program

The Leading State University in the Philippines

What is the MD degree? How different is it from the MBBS program?

Traditionally, in countries which adopt the Commonwealth system of education, they use the term “MBBS” (Bachelor of Medicine Bachelor of Surgery) for the medical degrees conferred to the medical students. As for countries which

adopt the American system, they use the term “MD” (Doctor of Medicine). However, despite the difference in name, the level of qualification between the two are actually equivalent, and both will allow the holder of the degree to practice as GPs (General Practitioners) as long as the country they practice in recognizes the university that confers the degree to them.

As for the issue of the word “surgery” being omitted from the “MD” title, as mentioned, the two degrees are actually the same thing. It is just that they use different names in different countries. The curriculum is very much the same; just that the order the lessons are conducted may be in a different sequence compared with the original MBBS course. In the developed countries, both qualify the holders as General Practitioners who are allowed to engage in minor surgery, in the strictest sense of the word “surgery”. Both also allow the holders to further upgrade by attending a post-graduate course and become medical specialist or surgeons.

For a better idea of how the degree are actually very similar despite differences in title due to the peculiarities of the American vs Commonwealth system, consider the IELTS vs TOEFL, BS vs BSc, SAT v GCSE, BA vs BBA etc. Despite the difference in name, all the above are generally considered mutual equivalents.

What is the method of teaching?

The syllabus will be taught based on the US style of teaching. The medical curriculum can be taught in many ways. Different learning methods suit different students, so diversity is supported among all our participating universities.

A wide range of teaching techniques are employed from traditional lectures and clinical attachments to problem based learning, small group work, clinical skills training, communication skills training and research projects. This will also ensure that students are exposed to a variety of working conditions and allow them to acquire different skill-sets which will be useful in their future careers.

What is the medium of instruction?

English is the medium of instruction for all the universities and English is widely spoken throughout the country. Students can communicate easily in English with the instructors, campus staff, locals, and even patients during the clinical rotations.

What is the BS-MD Medical Degree Program?

The BS-MD Medical Degree Program is a medical program that is approved by CHED (Commission on Higher Education) in the Philippines. It is a concurrent double-degree course in which students will be awarded two concurrent degrees upon graduation - the BS (Bachelor of Science) degree in Biology as well as the MD (Doctor of Medicine) degree.
